CyberGhost 7 for Amazon Fire TV and Fire TV Stick
Unlock a world of entertainment options while keeping your privacy

Bucharest, November 1, 2018 – The CyberGhost VPN team launches the dedicated Amazon Fire TV and Fire TV Stick app, complete with a huge selection of fast servers for the perfect streaming experience.

More than 20 million people from all over the world use CyberGhost VPN to become digitally invisible. Securing data as you move across the web and between devices is our specialty.

Today, we're thrilled to launch the dedicated CyberGhost for Amazon Fire TV and Fire TV Stick, the newest member of our CyberGhost 7.0 suite. No more expensive cable subscriptions or waiting around until your favorite shows become *available in your region*!

Our VPN is all you need to browse through thousands of options on Amazon Prime, while perfectly maintaining your digital privacy.

The ultimate streaming combo

Using an Amazon device means you probably care about your immersive entertainment. So we worked hard to give you a safety layer with the dedicated CyberGhost app. We hope it meets (and hopefully exceeds) your expectations.

Here are **the new features** we hope you'll love about CyberGhost 7 for Amazon Fire TV and Fire TV Stick:

- **One-tap VPN connection** – encrypt your data traffic on your device in just one tap. Keep your privacy picture perfect.
- **Streaming servers filter** – we placed borderless streaming at your fingertips. Use the filter to find servers that are specifically optimized for streaming content. Get ready to enjoy over 500,000 movies and TV episodes.
- **Favorite servers, always handy** – keep specific servers and countries close, so you can connect to them faster than ever before.
- **Smart Rules** – fully customize how CyberGhost works to protect your privacy by assigning specific triggers for different actions.
- **Easier to use than ever** - you don't have to be a techie to master the new Amazon app. The clean, simple design guarantees instant, effortless VPN protection.

But no worries, the core features you know and love about CyberGhost VPN are here to stay. What's more, we keep fine-tuning and developing them each day, so you can enjoy:

- **Fast servers all over the world** – choose from **3,000+ servers in 60+ countries** and switch your IP for an anonymous one each time. As always, CyberGhost comes with no bandwidth limit!
- **No logs kept. Ever** - as our founder said earlier this year (see the video), we believe "The only way to secure data is not to store it." We've always stood by our no-logs policy that gives each CyberGhost user complete anonymity while using the app.
- **More flexibility across devices** – our goal is to keep your identity and data safe across your favorite devices. Just note that an existing CyberGhost subscription is required for Amazon.

The new CyberGhost app works on any Amazon device such as the Fire TV box or TV Stick with at least Fire OS 4.6.

For the installation guides, head here.

Naturally, we can't wait to get feedback and continue to improve CyberGhost VPN to suit your privacy needs. We're here to help you with the challenges of securing your data!
