

CyberGhost video warns about dangers of public WIFI attacks

Bucharest, November 18th 2015 - *CyberGhost VPN, creator of most advanced privacy and security solutions is showing how easy it is to become a victim of an evil twin attack WIFI hack.*

With more than 50 million hotspots worldwide, most users connecting to a WIFI don't take all the necessary measures to protect themselves such as using a VPN service or a security solution. According to the aarp.org, 16 million mobile devices were infected by malware in 2014.

Due to high mobile data costs, travelers are the most sensitive targeted group when abroad. Business or leisure trips can easily turn into nightmares when connecting to fake WIFI hot spots created by hackers or when falling victim of a "man in the middle" attack.

CyberGhost has shown the dangers of using WIFI unprotected by a VPN solution. Every unencrypted communication while connected to the internet, can be intercepted: credit card information, user names and passwords or even security credentials for work computers. This data can not only be stolen but also shared or sold on the internet by cybercriminals. Encrypting data at a 256-bit AES level is the strongest protection available provided by CyberGhost VPN. During encrypted connections, all the data is secured and users can enjoy a safe online experience.

The video highlights the dangers of an evil twin attack - a WIFI hot spot created by criminals named identical to the legitimate one. In less than a minute, the security expert hired by CyberGhost has managed to obtain the credit card information and even simulate a purchase. To view the demo video, please refer to <https://www.youtube.com/watch?v=d9tv82IKDlk>

The latest version of CyberGhost VPN is offering, among a private, anonymous and ad free browsing also WiFi protection by encrypting all the communication and protection against malicious websites. To find out more about CyberGhost 5.5 visit: <http://cyberghostvpn.com/>
